

## **SOPS for General Surgery Labs:**

**Title: Animal Facility CO Chamber**

**Date: 6-2012**

**Last Updated: 10-2010**

- Place mouse cage from the regular housing rooms into a rat micro-isolator cage.
- Spray down micro-isolator with Clidox before taking it into W940.
- Make sure all the other cubicle doors are closed and then take the boxes into cubicle #6.
- Keep the door to cubicle #6 closed the entire time you are working.
- Once you are done with your experiment you must put the mouse cages back into the rat box and wipe down with Clidox again.
- Make sure that all of this is done in the cubicle with the door closed. Also make sure that all the other cubicle doors are closed too.
- Walk the mice to your regular housing room and remove them from the rat micro-isolator before you place them back into the room.
- This procedure must be followed each time you bring animals to our designated cubicle #6.
